

PAK-AUSTRIA FACHHOCHSCHULE:
INSTITUTE OF APPLIED SCIENCES AND TECHNOLOGY

ICT LAB 08 TASK

Course Code:	COMP-105L	Session	Fall 2025
Instructor	MS. Sibgha Noor	Semester	1 st
Task	01 & 02	Student Name	Eshal Ayub
Submission Date	12-12-2025	Roll No	B25F1061AI100

LAB REPORT

Objective

1. Develop familiarity with draw.io (diagrams.net) interface.
2. Create and format a flowchart and a hierarchical diagram.
3. Learn saving and exporting diagrams in PNG and .drawio formats.

Tools / Software

- draw.io (diagrams.net) ,web application (<https://app.diagrams.net>).
-

Procedure

Task 1: Login Flowchart

1. Open draw.io → Create New Diagram → Blank.
2. Add shapes: Oval (Start/End), Parallelogram (Input), Rectangle (Process), Diamond (Decision).
3. Label shapes with process steps: Start → Enter username & password → Check credentials → Credentials correct? → (Yes) Login Successful → End; (No) Invalid Credentials → back to input.
4. Connect shapes using arrow connectors; label decision branches Yes and No.
5. Style shapes: Start/End = green, Processes = blue, Decision = yellow. Align and distribute for clarity.
6. Save as .drawio and export PNG as Lab8_Task1_Flowchart.png.

Task 2: Computer System Hierarchy

1. In the same file, create new page named Task2_Hierarchy.

2. Add rectangles for Computer System, Hardware, Software, and child items (Input Devices, Output Devices, Storage Devices, System Software, Application Software).
 3. Connect as a top → bottom tree using straight connectors.
 4. Style: Computer System highlighted; sub-categories (Hardware/Software) with distinct fills; sub-items with subtle fills. Align and distribute horizontally for children.
 5. Save and export PNG as Lab8_Task2_Hierarchy.png.
-

Results

- Figure 1: Flowchart, full view.

- Figure 2: Flowchart, decision node and branching.

- Figure 3: Computer System hierarchy, full view.

- Figure 4: Hardware subtree zoom.

Discussion

- The flowchart correctly models the login control flow with a decision branch that returns to input on invalid credentials, meeting the task requirement for loop-back behavior. Styling (colors per symbol type) improves readability and satisfies the lab instruction to differentiate Start/End, Process, and Decision nodes.
 - The hierarchical diagram shows clear top-to-bottom decomposition of the Computer System into hardware and software, then further into components, using a clean tree structure. Proper alignment and spacing make relationships easy to follow.
-

Conclusion

The lab objective was met: learned draw.io basics (creating shapes, connectors, style, alignment) and produced two diagrams (flowchart and hierarchy). Saved editable .drawio file and exported PNGs for submission.
