INSTITUTE OF APPLIED SCIENCES AND TECHNOLOGY

ICT LAB 04 TASK 01

Course Code:	COMP-105L	Session	Fall 2025
Instructor	MS. Sibgha Noor	Semester	1 st
Task	01	Student Name	Eshal Ayub
Submission Date	31-10-2025	Roll No	B25F1061AI100

Lab Learning Objectives

The main objectives of this lab were:

- To understand the basic layout and tools of Microsoft Excel.
- To learn how to enter, format, and organize data properly.
- To apply basic formulas and functions for calculations.
- To use filters and conditional formatting for better data visualization.
- To create charts and analyze data using Excel tools.

Lab Task

Intro Page

Before starting the lab tasks, I also created an **Intro Page** in my Excel file.

This page contains all the basic details of the lab such as the **Department, Course Title, Lab Engineer, Program, Semester, Lab Assignment Topic, Lab Number, Student Name, Registration Number, and Scenario.**

I formatted the page neatly by using **Merge & Center, bold text, and cell borders** to make it look organized and professional.

I also inserted my **university logo** at the top of the page for a formal appearance.

The details I included are listed below:

- **Department:** IT and Computer Science
- **Course Title:** ICT Lab
- **Lab Engineer:** Mam Sibgha Noor
- **Program:** BS (Artificial Intelligence)
- **Semester:** 1st
- **Lab Assignment Topic:** Excel Formulae
- **Lab Assignment:** 4
- **Name:** Eshal Ayub
- **Registration No.:** B25F1061AI100
- **Scenario:** Students Record

This introduction page gives a clear overview of the lab assignment before moving on to the practical Excel tasks.

 									
Department	IT and Computer Science	Course Title	ICT Lab	Lab Engineer	Mam Sibgha Noor	Program	BS(AI)	Semester	1st
Lab Assignment Topic	Excel Formulae	Lab Assignment	4	Name	Eshal Ayub	Registration No.	B25F1061AI100	SCENARIO	Students Record

Task 1: Workbook Setup

I created a new Excel workbook and renamed the worksheet as “**Student Records.**”

In the first cell, I added the title “*Student Marks Record Sheet*”, made it bold, and centered it across the top.

I used a peach color for the title row and saved the file with my registration number.

Task 2: Student Data Table

I created a table that included **Name, Roll No, Phone Number, Date of Birth, and Marks in three subjects (English, Math, Computer).**

I formatted each column according to the data type: text, number, date, and special format for phone numbers.

Borders, alignment, and colors were added to make the table neat and professional.

Students Record									
Student Marks Record Sheet									
Name	Roll No	Phone Number	Date of Birth	English	Math	Computer	Total	Average	Result
Aisha Khan	AI-001	0334-1234567	12/3/2005	78	82	89	249	83	Pass
Bilal Ahmed	AI-002	0341-9876543	15/07/2005	64	72	80	216	72	Pass
Hina Malik	AI-003	0315-5543211	5/9/2005	91	88	93	272	90	Pass
Saad Farooq	AI-004	0320-7654321	18/01/2005	55	63	59	177	59	Fail
Zoya Anwar	AI-005	0332-2221114	22/05/2005	70	75	78	223	74	Pass

Task 3: Calculations

I added three new columns named **Total Marks**, **Average Marks**, and **Result**.

Then, I calculated the total and average marks of each student.

In the result column, I displayed whether the student passed or failed depending on their average marks.

At the end of the table, I found the **highest marks**, **lowest marks**, and **class average**.

The data was aligned properly and formatted clearly.

Total	Average	Result
249	83	Pass
216	72	Pass
272	90	Pass
177	59	Fail
223	74	Pass

Task 4: Filters & Conditional Formatting

I applied filters to the entire table so that I could easily view or organize specific data.

Next, I used conditional formatting to make the table more visual:

- Marks greater than 70 were highlighted in **green**.
- Marks below the class average were highlighted in **red**.

Average	Result
83	Pass
72	Pass
90	Pass
59	Fail
74	Pass

•

Task 5: Expense Sheet and Chart

I created an **Expense Sheet** that included different items, their quantity, and price per unit. The total cost of each item was calculated by multiplying quantity and price.

At the end of the list, I calculated the **grand total**.

Finally, I inserted a **Column Chart** titled “*Expense chart*” to visually represent the data.

I also added borders, bold headings, and alternate row shading for a professional look.

Summary / Conclusion

From this lab, I learned how to use Microsoft Excel effectively for data entry, organization, and analysis.

I practiced using important features like formulas, filters, conditional formatting, and charts.

This lab improved my practical skills and confidence in working with spreadsheets, which are essential for both academic and professional tasks.
